### SCOPE OF THE WORKS

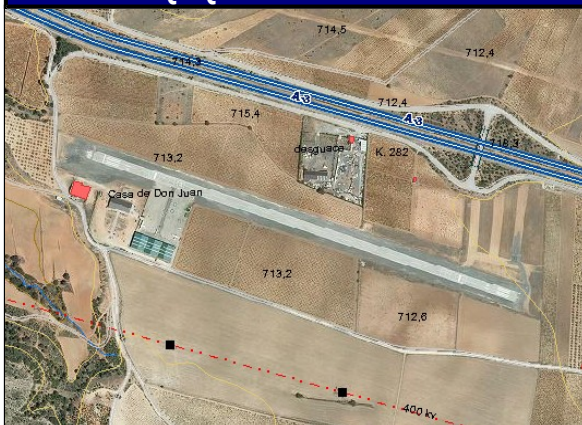

The growing importance of air traffic, both its strategic nature for regional development and the subsequent changes in airport management, make the advent of planning instruments a top priority for ensuring greater efficiency and full integration in the region's productive system.

In response to this approach, CPS Ingenieros is currently in the process of drafting the Valencian Community Aeronautical Facilities Plan, as commissioned by the Directorate General of Ports, Airports and Coastal Areas of the Regional Government

### TASKS DEVELOPED

- Inventory of the existing facilities in the Valencian Community. Each facility will be presented on an information sheet underlining the most outstanding features.
- Report with the most significant features of the Manises, El Altet and future Castellón airports.
- Development strategies for the Valencian Community's airport system.
- Drafting of the Valencian Community Aeronautical Facilities Plan. This document shall take the form of Territorial Action Plan, of Sectorial nature, taking into account the urban development and land use and planning standards in the Valencia Region.
- Individual record sheets of the proposed infrastructures.
